

Untreated Deck or Porch Lumber

2

Watch for these signs of Eastern Subterranean Termites...

- 1 Termites usually enter homes through cracks or openings in exterior walls.
- 2 Wood may appear unaffected, and should be probed with a sharp tool to check for decay and structural damage.
- 3 Termites build earth-colored tubes from the ground to the wood they are feeding on.
- 4 Wings shed from winged termites are a sure sign of termite infestation.
